PRICE EIGHT CENTS

HYDE SCHOOL OPENS THIS MORNING — These are a portion of the 42 youngsters who began classes at the Hyde School this morning. The shot was taken in the library during a break in the opening morning testing schedule. The summer program will run for eight weeks. The school will then reopen in the fall for its first full year.

Hyde School Starts Summer Session

Forty-two boys ranging in age from 13 through 18 began preliminary testing this morning in preparation for eight weeks of summer school as the new Hyde School opened its doors in the Shipbuilding City.

The opening of the school brings to fruition the efforts of the city's economic Coordinating Committee that began initial efforts for the school last fall.

The 42 boys enrolled in the initial summer program hail from all over the eastern seaboard from, Lexington, Ky.; Middleburg, Va. and west to Columbus,

Ohio. Massachusetts provides the largest number of students. Maine is second and New York, third.

Headmaster Joseph W. Gauld reports the youngsters face what he calls "a summer of challenge and opportunity."

Each student will take two classes of English — grammar and literature — one in mathematics with emphasis on Algebra concepts, and a course in study skills, Gauld reports.

The summer session operates on an ungraded basis, according to Gauld. Each student is assigned to the same classes, whether he is

an eighth grader or an eleventh grader.

Gauld reports there is an equally wide spread in the past accomplishments of the 42 boys. He says they range from all "A" students to all "D" students.

What they have in common, however, the headmaster reports, is a record of achieving less in school than their abilities would indicate "and a willingness to give up eight weeks of a summer to do something about it."

The level of past achievement serves as a guide to tailor class work to meet the needs of each in-

dividual student, according to Gauld.

About half of the initial class of summer school students will probably be enrolled full time in the fall, Gauld, reports. Others will return to other public and private high schools.

The initial summer program starts off at more than two-thirds the eventual summer capacity. Gauld says in future summers up to a maximum of 60 students can be accommodated.

Two of the summer students are commuting from their homes. The rest live at the school.

Smoking Linked To Emphysema

By ROBERT GOLDENSTEIN
AP Science Writer

CHICAGO (AP) — Emphysema, a lung disease with a death rate increasing faster in the United States than that of any other single disease, has been produced experimentally in cigarette-smoking dogs, a medical research team reported today.

At two smoking sessions daily, for more than a year, the dogs inhaled cigarette smoke through hollow plastic tubes inserted in their windpipes.

In a report to the general scientific session of the annual meeting of the American Medical Association, the researchers said:

"The inhalation of smoke di-
